Acknowledgements

During the course of this rate study, several City employees expended considerable time and effort in assisting the project team. These employees included the Mayor and Council, Ms. Wynette Reed, Mr. Kini Knudson, Mr. Steve Scinto, Mr. Ryan Bittle, Mr. Kevin Custer, Ms. Julia Cary, Ms. Barbara Chappell, Mr. Sumeet Mohan, and members of the City's Water Planning Committee. The project team owes a debt of gratitude to the hard work, dedication and professionalism of these individuals, without whom this project would not have been successfully completed.

The project team has relied upon the extensive data supplied by the City. Thus, the integrity of the study is largely dependent upon the accuracy of this financial and volumetric data. Every effort has been made by the project team to validate and confirm the information contained herein prior to the preparation of the final study documents. This report presents no assurance or guarantee that the forecast contained herein will be consistent with actual results or performances. These represent forecasts based on a series of assumptions about future behavior, and are not guarantees. Any changes in assumptions or actual events may result in significant revisions to the forecast and its conclusions. The cash flow projections and debt service coverage calculations are not intended to present overall financial positions, results of operations, and/or cash flows for the periods indicated, which is in conformity with guidelines for presentation of a forecast established by the American Institute of Certified Public Accountants.

Willdan Financial Services ("Willdan") is registered as a "municipal advisor" pursuant to Section 15B of the Securities Exchange Act and rules and regulations adopted by the United States Securities and Exchange Commission ("SEC") and the Municipal Securities Rulemaking Board ("MSRB"). The MSRB has made available on its website (www.msrb.org) a municipal advisory client brochure that describes the protections that may be provided by MSRB rules and how to file a complaint with the appropriate regulatory authority. As part of its SEC registration Willdan is required to disclose to the SEC information regarding criminal actions, regulatory actions, investigations, terminations, judgments, liens, civil judicial actions, customer complaints, arbitrations and civil litigation involving Willdan. Pursuant to MSRB Rule G-42, Willdan is required to disclose any legal or disciplinary event that is material to Client's evaluation of Willdan or the integrity of its management or advisory personnel. Willdan has determined that no such event exists. Copies of Willdan's filings with the United States Securities and Exchange Commission can currently be found by accessing the SEC's EDGAR system Company Search Page which is currently available at: <https://www.sec.gov/edgar/searchedgar/companysearch.html> and searching for either Willdan Financial Services or for our CIK number which is 0001782739.

For the avoidance of doubt and without limiting the foregoing, in connection with any revenue projections, cash-flow analyses, feasibility studies and/or other analyses Willdan may provide the municipality with respect to financial, economic or other matters relating to a prospective, new or existing issuance of municipal securities of the municipality, (A) any such projections, studies and analyses shall be based upon assumptions, opinions or views (including, without limitation, any assumptions related to revenue growth) established by the municipality, in conjunction with such of its municipal, financial, legal and other advisers as it deems appropriate; and (B) under no circumstances shall Willdan be asked to provide, nor shall it provide, any advice or recommendations or subjective assumptions, opinions or views with respect to the actual or proposed structure, terms, timing, pricing or other similar matters with respect to any municipal financial products or municipal securities issuances, unless formally engaged to provide such information.

Executive Summary

Background

In March 2025, the City of Goodyear, Arizona (the “City”) engaged **Willdan** to conduct a water, wastewater, and solid waste utility cost of service rate study and develop a long-term financial plan. The City was interested in evaluating the cost of service for each defined customer class and developing a comprehensive rate plan for Fiscal Year (“FY”) 2026 and beyond. The City utilizes standard governmental accounting procedures for its general and enterprise funds. The Fiscal Year begins on July 1st and ends on the following June 30th.

The City has identified numerous objectives for this study, including but not limited to the following:

- A comprehensive analysis and evaluation of the water and wastewater systems’ and solid waste operations’ current cost of service and revenue requirements
- An estimate of current and forecast accounts, volumes and billing units for the ten-year forecast period
- An assessment and evaluation of the known and potential changes occurring within the City’s utility systems including but not limited to Central Arizona Project (“CAP”) water costs and supplemental capital projects
- A forecast of operating expenses over the next decade, taking into consideration such factors as inflation, system growth, and increases in staffing levels
- A thorough review of the water, wastewater, and solid waste known capital improvement needs, as well as a determination of the need for funding capital requirements through the issuance of long-term debt
- The development of a rate structure that would recover the City’s cost of service, ensure equitable, just and reasonable treatment of identified customer classes, and maintain critical financial ratios

In conjunction with City staff, the project team evaluated numerous alternative scenarios and rate structures, each of which would enable the City to achieve these objectives while continuing to provide ratepayers with superior quality water, wastewater, and solid waste service. After a series of meetings with City staff, the Water Planning Committee and the City Council, the project team narrowed its recommendations to the alternative water, wastewater, and solid waste rate designs contained in this study. The analysis and recommendations presented in this study achieve all of the objectives outlined above.

Water, Wastewater, and Solid Waste Rate Comparison

Chart ES-1 graphically compares the City's monthly charges for an average household's usage of 7,500 gallons of water service and 5,000 gallons of wastewater service to those of other nearby providers in the Phoenix area. Volumes of 7,500 gallons water and 5,000 gallons wastewater were used for the comparison as they represent typical usage levels for an average household in Goodyear.

Chart ES-2 compares the City's current monthly Residential charge for Residential collection and disposal to those of neighboring municipalities.

The rate data is based on published rates and ordinances posted by each municipality or provider in their rate ordinance or reported on their website. These rates do not include sales tax, activation or other charges beyond the basic minimum and volume charges.

CHART ES-1

*Rates as of May 2025

CHART ES-2

*Rates as of May 2025

Water, Wastewater, and Solid Waste Customers – Test Year & Ten-Year Forecast

Table ES-3 presents historical and forecast total water and wastewater accounts and classifications. It is important to note that account growth for the City will not be comparable to total population growth, since the City is not the sole provider of water service within its total area.

Chart ES-4 presents historical and forecast growth in total solid waste accounts and additional containers.

It must be stressed that if the City does not connect these projected new connections, financial and rate plan assumptions will need to be substantially modified.

CHART ES-4

Debt Service and Capital Improvement Plan

A key factor in the development of the City's long-term water, wastewater, and solid waste rate plan is the amount of existing and forecast debt needed to fund capital projects not funded through development fees, reserves or other sources such as private sector development agreement financing or grants.

At present time, the City has eleven current water and wastewater debt obligations. The City does not have any solid waste debt obligations.

Table ES-5 presents a functional summary of the City's ten-year water and wastewater Capital Improvement Plan.

TABLE ES-5

CITY OF GOODYEAR	
CAPITAL IMPROVEMENT PLAN	
SCENARIO: 2025 10 10 -- Scenario I -- Status Quo	
WATER CIP Projects	
61-23-234 - Site 13 & 23 Chlorination System Upgrades	\$ 500,000
60101 - Site 21 Nitrate Treatment - Bond for future spend	15,000,000
61-21-117 - Site 11 Reservoir Rehabilitation	3,000,000
61-24-356 - Site 10 Booster Tank Rehab	2,000,000
61-24-353 - Pressure Zone Split WPA 2	25,500,000
60-24-349 - Salt River Project Lateral Upgrades	8,000,000
61-25-458 Well #25 Equip & Expand Treatment at Site 12	7,119,300
60-24-358 - Well 18B Redrill	2,407,000
61-20-001 Water Main Replacement	3,180,000
61-26-477 EMR Parcel 74 Water Main Replacements	6,926,000
60096 aka 61-21-001 - Site 18 Increase Storage(1.5MG) & Rehab existing tank	5,300,000
NEW - Well 12 Redrill	2,500,000
61-25-460 Well 11 Redrill	2,500,000
60041 - Water Main Replacement	2,553,000
61-24-357 - Site #11 Booster Station MCC Replacement	3,000,000
PFAS Treatment at Site 18	4,060,000
Purchase extinguishment credits	2,000,000
2030 IWMP Update	500,000
2035 IWMP Update	500,000
Expand SWTF to 16MGD	165,000,000
Total Water Projects	261,545,300
WASTEWATER CIP Projects	
61-23-223 - Rainbow Valley Lift Station Force Main	\$ 2,395,900
60077 - Rainbow Valley WRF Expansion - Growth Portion	34,663,540
61-23-245 - Lum Lift Station Force Main	5,544,200
60103 - Corgett WRF Clarifier Rehabilitation and New Clarifier	3,031,800
60062 - Goodyear Motel-Country Aire Apartments Sewer Piping	1,062,000
60093 GWRF Blower Replacement	589,400
61006 GWRF Blower Replacement	611,000
61014 - Goodyear Water Reclamation Facility Expansion	140,481,100
61013- Perryville Grinder Project	2,480,700
61-26-480 Historic Goodyear Sewer Replacements	6,643,000
Perryville Grinder/Auger #1 Replacement	2,547,000
61-24-352 Del Camino Lift Station Generator Replacement	650,000
61016 Wells Fargo Lift Station and Force Main	6,143,500
Fix Bottleneck in Reclaimed Pipe and Improve Aesthetics of SAT Site	3,000,000
Recharge Well 1	10,000,000
Recharge Well 2	10,000,000
SAT Site in WPA 4	18,050,000
2030 IWMP Update	500,000
2035 IWMP Update	500,000
Force main assessments (installing access points, cleaning, televising for pipe condition)	2,500,000
CIPP both main lines from Elwood Rd. into the GYWRF plant due to multiple defects. (\$1M)	2,500,000
Golf LS Demo (including the lift station due to safety hazard with wells) and Cotton force main removal.	1,000,000
Total Wastewater Projects	254,893,140
Total CIP 2026 -- 2035	516,438,440

In discussions with City staff, it was determined that the City plans to issue approximately **\$403.9 million** in new debt over the ten-year forecast period as presented in **Table ES-6**.

TABLE ES-6

CITY OF GOODYEAR FORECAST LONG-TERM DEBT REQUIRED TO FUND CIP

Water, Wastewater, and Solid Waste Test Year and Forecast Net Revenue Requirement

Table ES-8 presents the ten-year forecast for the City's water and wastewater net revenue requirement to be raised from rates. As the table reveals, the City's water and wastewater net revenue requirements are projected to increase from \$85,843,117 in FY2026 to \$138,127,931 in FY2035. This represents an annual rate of growth of **5.4%**.

Table ES-9 presents the ten-year forecast for the City's solid waste net revenue requirement to be raised from rates under recommended rate plan. As the table reveals, the City's solid waste net revenue requirement is projected to increase from \$11,096,091 in FY2026 to \$22,010,821 in FY2035. This represents an annual rate of growth of **7.9%**.

Water, Wastewater, and Solid Waste Rate Recommendations

During the course of this engagement the project team met with City staff to discuss numerous alternative rate scenarios and rate plans. As a result of these discussions, staff and the project team settled on the water, wastewater, and solid waste scenarios and rate designs presented in this report. These scenarios include all direct and indirect expenditures for operations and maintenance, capital requirements for expansion, repair and replacement, debt service and required reserves. The proposed rate plans are designed to capture sufficient revenues for these purposes as well as sufficient coverage of the basic cost of service.

Water and Wastewater Rate Recommendation

Under the recommended rate proposal, the City implements a series of annual water and wastewater rate adjustments over the four-year period FY2026 through FY2029 to achieve cost of service rates for water and wastewater operations. A full rate forecast is presented in **Appendix A**.

The projected rate revenues collected by the utility are forecast to be sufficient to fund all operating expenses and capital obligations in each of the forecast years. This alternative assumes the following:

- Maintains the current rate design structure for both water and wastewater customer classes
- Rate adjustments are uniformly applied to both base and volume charges
- Water rate adjustments are uniformly applied to all water rate classifications
- Wastewater rate adjustments are uniformly applied to all wastewater rate classifications

Table ES-10 presents a summary of the water rate plan proposed for the City for the next four years and **Table ES-11** presents a summary of the wastewater rate plan.

Table ES-12 on the next page include examples of the impact on typical monthly bills. The recommended rate plan continues the City's policy of implementing water and wastewater rate changes in January of each year.

TABLE ES-10

CITY OF GOODYEAR						
PROPOSED WATER RATE PLAN						
Scenario: 2025 10 10 -- Scenario I -- Status Quo						
Water Rates		Current	Effective Jan-26	Effective Jan-27	Effective Jan-28	Effective Jan-29
CAP Water Charge		\$ 1.70	\$1.70	\$1.70	\$1.70	\$1.70

Increase -- Percent		8.0%	8.0%	8.0%	8.0%

While this study presents a forecast of rates over the next four years, it is recommended that the City monitor actual growth in accounts and consumption, and update its forecasts annually due to the dynamic nature of growth in the City and the rapid rate of change within the utility. Periodic reviews will enable the City to assess the need for adjustments to the long-term rate plan.

SECTION I

Introduction and Demographic Profile

Background

In March 2025 the City of Goodyear, Arizona (the “City”) engaged **Willdan Financial Services** to conduct a water, wastewater, and solid waste utility cost of service rate study. The City was interested in evaluating the cost of service for each defined customer class and developing a comprehensive rate plan for Fiscal Year (“FY”) 2026 and beyond. The City utilizes standard governmental accounting procedures for its general and enterprise funds. The Fiscal Year begins on July 1st and ends on the following June 30th.

In this study, FY 2026 will also be referred to as the Test Year (“TY”). As noted in the *AWWA Manual M1*, the selection of a test year is an important starting point for establishing a utility’s revenue requirements. The test year may be based entirely on historical data, projected data, or, as in this study, “pro forma” which begins with historical costs and then adjusts for those “known and measurable” changes.

The City has identified numerous objectives for this

study, including but not limited to the following:

- A comprehensive analysis and evaluation of the water, wastewater and solid waste operations’ current cost of service and revenue requirements
- An estimate of current and forecast accounts, volumes and billing units for the ten-year forecast period
- An assessment and evaluation of the known and potential changes occurring within the City’s utility systems including but not limited to Central Arizona Project (“CAP”) water costs and supplemental capital projects
- A forecast of operating expenses over the next decade, taking into consideration such factors as inflation, system growth, and increases in staffing levels
- A thorough review of the water, wastewater, and solid waste known capital improvement needs, as well as a determination of the need for funding capital requirements through the issuance of long-term debt
- The development of a rate structure that would recover the City’s cost of service, ensure equitable, just and reasonable treatment of identified customer classes, and maintain critical financial ratios

- An analysis of the existing water rate block structure for overall effectiveness

In conjunction with City staff, the project team evaluated numerous alternative scenarios and rate structures, each of which would enable the City to achieve these objectives while continuing to provide ratepayers with superior quality water, wastewater, and solid waste service. After a series of meetings with City staff, the Water Planning Committee and the City Council, the project team narrowed its recommendations to the alternative water, wastewater, and solid waste rate designs contained in this study. The analysis and recommendations presented in this study achieve all of the objectives outlined above.

Report Organization

This report is organized into the following sections:

Section I – Introduction and Demographic Profile - outlines the background, objectives and scope of this rate study and long-term financial plan. Also presents the City's current rate structures and a demographic profile of the City of Goodyear. This includes a comparison of the City's water and wastewater charges with other cities in Arizona.

Section II – Water and Wastewater Test Year and Forecast Volumes – analyzes the City's customer base, total accounts and current volumes of treated water and wastewater. This section presents totals for the current year and a forecast ten years into the future.

Section III – Water and Wastewater Test Year and Forecast Revenue Requirement – outlines the process of analyzing the City's current water and wastewater utility cost structure. The total current or "test year" revenue requirements are developed, and costs are functionalized between treatment, distribution/collection, administration and customer billing. Using the test year as a basis, costs are forecast for a ten-year period.

Section IV – Water and Wastewater Rate Design – presents a rate design recommendation for the City to consider which would enable it to meet its revenue requirements over the next five years. Also presents an analysis of the impact of these alternative rate plans on each defined customer class.

Section V – Solid Waste Service Cost Analysis and Rate Design – presents the forecast revenue requirement and rate design recommendations for the City's solid waste collection system.

Appendix A – presents a hard copy printout of key worksheets from the Microsoft Excel spreadsheet model developed for the City to calculate water and wastewater current and future revenue requirements. The model automatically generates all calculations based on a set of defined user inputs.

Appendix B – presents a hard copy printout of key worksheets from the Microsoft Excel spreadsheet model developed for the City to calculate solid waste current and future revenue requirements. The model automatically generates all calculations based on a set of defined user inputs.

City Leadership

Goodyear, Arizona is a city with a rich, rewarding quality of life and tremendous community spirit, exemplified by two prestigious national awards in 2008 – The All-American City and City Livability awards. Goodyear offers all the advantages of a small community, with all the cultural and entertainment resources that the Phoenix area offers.

Goodyear is strategically located at the base of the Estrella Mountains, in the southwest portion of the Phoenix metro area, just 20 minutes west of downtown Phoenix. Its strategic location on Interstate 10 provides easy access to Los Angeles to the west, Phoenix and Tucson to the east. Goodyear spans approximately 191 square miles, making it the 5th largest city in Arizona by

land area.

Goodyear is the Spring Training home of the Cleveland Guardians and the Cincinnati Reds. The desert vistas, majestic mountains, and master planned communities with lakes, country clubs and golf courses encourage an active outdoor lifestyle that attracts many residents and businesses to Goodyear.

The City operates under a Council-Manager form of government. The Council consists of the Mayor and six council members– all elected at large on a non-partisan ballot. The Mayor and Council serve four-year terms. The Mayor has a two-term limit and Council a three-term limit. Council members serve staggered terms.

The City Manager reports to the Mayor, Council and the Citizens of Goodyear, and is responsible for the day-to-day operations of the City. All changes to the City's water, wastewater, and solid waste rate structure must be approved by a vote of the Council. **Table I-1** lists current serving City officials.

TABLE I-1

CITY OF GOODYEAR			
CITY OFFICIALS -- AUGUST 2025			
Mayor and Council		Senior City Staff	
Joe Pizzillo	<i>Mayor</i>	Wynette Reed	<i>City Manager</i>
Wally Campbell	<i>Vice Mayor</i>	Justin Fair	<i>Deputy City Manager</i>
Brannon Hampton	<i>Council Member</i>	Kini Knudson	<i>Deputy City Manager</i>
Laura Kaino	<i>Council Member</i>	Rachel Garcia	<i>Deputy City Manager</i>
Vicki Gillis	<i>Council Member</i>	Jared Askelson	<i>Director of Finance</i>
Benita Beckles	<i>Council Member</i>	Ryan Bittle	<i>Finance Manager</i>
Trey Terry	<i>Council Member</i>	Sumeet Mohan, P.E.	<i>Public Works Director</i>

In addition, the City utilizes various Boards, Committees, and Commissions to advise the Council, including the Water Planning Committee. The Water Planning Committee was involved at several milestones of the study for both informational and review purposes and provided both important input and valuable recommendations.

Water and Wastewater Current Rates

Table I-2 summarizes the City's current water, wastewater and effluent (reclaimed water) rates.

TABLE I-2

CITY OF GOODYEAR					
CURRENT WATER AND WASTEWATER RATES					
Monthly Minimum Charge	Water		Wastewater		
	CITY	COUNTY*	CITY	COUNTY*	
3/4"	\$ 20.87	\$ 26.08	\$ 27.29	\$ 34.11

1 1/2"	46.66	58.33	51.59	64.49	
2"	75.53	94.42	100.23	125.29	
3"	87.42	109.27	132.21	165.26	
4"	142.55	178.18	175.40	219.25	
6"+	270.53	338.16	434.55	543.18	
Volume Rate/1,000 Gal					
<u>Residential - City</u>					
- 6,000	2.42	3.02	7.47	9.34	
6,001 12,000	4.81	6.01	7.47	9.34	
12,001 30,000	7.23	9.03	7.47	9.34	
30,001 Above	11.60	14.50	7.47	9.34	
<u>Multi-Family/Commercial/Industrial</u>					
- 40,000	5.70	7.12	7.47	9.34	
40,001 100,000	9.12	11.40	7.47	9.34	
100,001 Above	11.82	14.77	7.47	9.34	
<u>Irrigation</u>					
- 80,000	8.52	10.65	NA	NA	
80,001 Above	9.80	12.25	NA	NA	
<u>Reclaimed Water</u>					
Per 1,00 Gallons	NA	NA	3.29	NA	
* County customers are charged a 25% premium					

All City water accounts are assessed a base charge based on meter size in addition to their inverted block volumetric rate structure. Non-Residential, Multi-Family, Schools, Churches, Hydrants, Institutional, and Industrial accounts are assessed commercial rates. Irrigation customers pay the commercial base rates, but a separate inverted block volumetric rate. Residential-County accounts are located outside of the city limits and have base

charges that are 25% higher than Residential-City accounts. Water Volume rates for Residential-County customers for all tiers are also billed at 25% higher than City accounts.

Residential wastewater accounts pay a base charge based on meter size as well as a flat volumetric rate. Non-Residential, Multi-Family, Schools, Churches, Hydrants, Institutional, and Industrial accounts are assessed commercial rates which include a base charge based on meter size and a flat volumetric rate. Until July 2015, the Perryville Prison paid the City for sewer services based on a long-standing contractual agreement with the City. Beginning in July 2015, the Prison began paying the commercial volumetric charge.

Treated Effluent, or Reclaimed Water is sold for use in landscape irrigation. The current reclaimed water (effluent) rates include a base charge based on meter size and a flat volumetric charge.

Current Charges and Comparisons

Table I-3 compares the City's monthly charges for an average household usage of 7,500 gallons of water service and 5,000 gallons of wastewater service to other providers in the Phoenix area. **Chart I-4** presents the combined average charges graphically. Volumes of 7,500 gallons water and 5,000 gallons wastewater were used for the comparison as they represent typical usage levels for an average household in Goodyear. The rate data is based on published rates and ordinances posted by each municipality or provider in their rate ordinance or reported on their website.

These rates do not include sales tax, activation or other charges beyond the basic minimum and volume charges. Comparisons such as these are for usage charges only. This type of comparison may have the unintended effect of discriminating against communities who choose to finance system expansions through current rates or revenue bonds, which are included in rates, as opposed to those who utilize general obligation bonds, which are funded through taxes. All else being equal, a City that primarily or exclusively uses general obligation bonds will have a lower water rate per 1,000 gallons but a higher tax rate.

CHART I-4

*Rates as of May 2025

SECTION II

Water & Wastewater Test Year and Forecast Volumes

In order to accurately forecast future revenues and expenses, it is necessary to examine current water and wastewater utility conditions. The first step in developing cost of service rates is to analyze patterns of usage, both for the system as a whole and for specified customer classes.

For the City of Goodyear, water and wastewater records maintained by the City were reviewed for the period beginning in January 2023 and ending in February 2025. These records provided information on the monthly water volumes distributed system-wide as well as the number of accounts for each month and the associated revenues. Additionally, these records provided the number of accounts, billing units and revenues by month for all classifications of

wastewater customers.

According to standard utility ratemaking methodology, in order to allocate revenue requirements equitably among system users, customers must be classified into relatively homogeneous groups with similar usage characteristics or service demands. Costs are then allocated to the customer classes in proportion to the usage characteristics of each class. For the water system, costs are typically allocated to customers based on their average and peak water demands. For the wastewater system, costs are allocated to customers based on their estimated wastewater flows, and in some cases, based on wastewater strengths.

After thoroughly examining volume and customer data and discussions with City staff, the project team incorporated City's water customers into 10 distinct customer classes, and City's wastewater customers into 9 distinct customer classes. The project team finds these customer class distinctions to be reasonable and appropriate, meeting the criteria of homogenous groups with similar usage patterns.

In this section the City's functional customer classes and test year usage patterns will be thoroughly analyzed. A ten-year projection of customers and usage will also be presented. These forecasts, along with the revenue requirements, will form the basis of the rate design recommendation.

Water and Wastewater Customers – Test Year & Ten-Year Forecast

The majority of the City's accounts are Residential-City which are located inside the city limits, followed by Irrigation, Non-Residential, Construction, Industrial, Multi-Family, Schools, and Institutional accounts. The

Residential-County customer classes for both water and wastewater are relatively small and are expected to experience little growth during the forecast period.

Table II-1 presents total water accounts and classifications for the City for the past three years and the forecast growth over the next decade. It is important to note that account growth for the City will not be comparable to total population growth, since the City is not the sole provider of water service within its geographical limits. Growth estimates for TY 2026 include new accounts forecast in FY 2026.

In total, water accounts are forecast to increase from 25,640 in the test year FY 2026 to 33,272 in FY 2035, an average annual increase of **2.9%**.

2035	773	3	1	14	5	-	-	-	3	799

Table II-2 on the next page presents wastewater accounts and classifications for the City for the past three years and the forecast growth over the next decade. In total, wastewater accounts are forecast to increase from 26,201 in the test year FY 2026 to 33,779 in FY 2035, an average annual increase of **2.9%**.

It must be stressed that if the City does not connect these projected new accounts, financial and rate plan assumptions will have to be modified.

Historical and Forecast Water Consumption

Total water system consumption data was analyzed over the same time period as customer data. Forecast consumption for each account class was developed from the historical data provided. In accordance with the AWWA Manual M50, *Water Resource Planning*, a “weather-normalized” forecast was developed to represent consumption patterns anticipated for each customer class using historical data and trends. Changes in consumer behavior in response to changes in pricing and certain rate structures designed to encourage conservation were taken into account in forecasting consumption.

Chart II-3 on the next page presents the percentage of total forecast consumption by customer class in the test year. This chart illustrates the relative volume demands of each class, as well as the fact that the Residential-City customer class is the single largest user, accounting for **50.1%** of the test year billed consumption.

CHART II-3

The project team forecasts total consumption of approximately **4,465,013,328** gallons of water in the test year FY 2026. **Table II-4** and **Chart II-5** on the next page present forecast consumption by rate class for FY 2026 and the ten-year forecast period.

The table reveals that total water consumption is forecast to increase by an annual average of **2.8%** over the forecast period.

TABLE II-4

CHART II-5

Peaking Factors

The cost of providing water to customers depends not only on the amount of water each class uses, but also on how that usage occurs over time. The maximum-day and maximum-hour peaking requirements of a water utility's customers are an important influence on the utility's costs. Because water utilities attempt to meet all of the demands of their customers, water systems are sized to meet customers' peak requirements. Therefore, during off-peak periods, there are usually significant costs associated with the unused capacity of the system. These costs must be allocated to customers in proportion to the contribution of each customer class to the system peak, in order to develop equitable cost-based rates. Thus, it is necessary to determine the peak rate of use relative to the average rate of use for each class. This ratio is called a **Peaking Factor**.

The consumption data by class provided by the City was utilized in the rate model to calculate the peak day factor and peaking factors for individual rate classes.

The calculation of peaking factors for individual classes relies on available pumping and consumption information as well as professional judgment. If customer meters could record daily flow rates for each customer, more refined information could be obtained on peaking factors. This is not feasible because of the enormous cost that would be imposed on the utility. Therefore, it is an accepted practice in the water industry to develop peaking factor estimates based on standard formulas using system peak day information and monthly customer class usage records. This is a conservative methodology, since customer class peaking factors based on peak months will inevitably be lower than the system-wide peaking factor, which is based on the peak day.

Based on AWWA guidelines, the customer class peaking factors calculated in this study are for non-coincidental peaks. The peaking factors developed for this analysis are based on actual monthly water consumption by customer class for the forecast period based on averaged historical consumption. A general ratemaking rule is that **the higher the peak to average ratio, the higher the unit cost of service for a given customer class**. While this is not an absolute rule, it is a good general indicator as to which customer classes are incurring the greatest costs to provide service. This principle will be examined more thoroughly in Section III.

Chart II-6 below shows peak to average ratio by customer class.

CHART II-6

The chart reveals that the highest peak to average ratio is for Irrigation customer class. The greater cost of service applied to these types of accounts is directly linked to the cost borne by the utility to maintain the capacity to serve these accounts at high demand levels which may fluctuate erratically.

Historical and Forecast Wastewater Flows

As with billed water consumption, the project team prepared a ten-year forecast of wastewater billing units. Residential City and County customers are billed based on winter average water usage. Effluent and Perryville Prison wastewater is billed on 100% of water usage and all other customer classes are billed based on 80% of water consumption. Since individual wastewater usage is not metered, it is derived from the water consumption figures for each customer class. The billing unit forecast is derived using anticipated account growth as depicted in Table II-2. The results of the forecast are presented in **Table II-7**. **Chart II-8** on the next page presents the wastewater flows forecast graphically.

Two points are notable about this table. First, as with water, these billing units are forecast based on the growth of wastewater accounts and anticipated consumption ratios built into the rate model. These units and ratios were estimated from growth projections of City staff. Secondly, wastewater usage is not subject to the significant fluctuations experienced by water accounts. This is because the water volume fluctuation is largely due to outdoor usage that is not returned to the wastewater system. The table reveals that wastewater billing units are forecast to increase by an annual average of **2.7%** over the forecast period.

CHART II-8

SECTION III

Water & Wastewater Forecast Revenue Requirement

In this section of the water and wastewater rate study and long-term financial plan, the City's test year and forecast water- and wastewater utility revenue requirements are developed. The test year consists of the City's fiscal year, July 1, 2025 through June 30, 2026.

The estimates presented in this section are based on the City's water and wastewater budgets for FY 2026, as well as a forecast of the City's future capital improvements and debt obligations.

The City's water and wastewater utilities are enterprise funds, and as such, are financed solely through related rates and fees. The calculation of a revenue requirement differs from a utility's budget in that it represents only that

amount that must be raised through the City's user rates. This means that non-rate revenue (such as connection fees, late payment charges and interest) must be subtracted from the budgeted operating and capital expenditures to determine the net revenue requirement to be raised from rates.

As is typical for publicly owned utilities, Goodyear's system revenue requirements were developed using the cash basis of ratemaking. Under the cash basis, as defined by the AWWA Manual M-1, system revenue requirements consist of cash expenditures and other financial commitments (such as debt service coverage or reserves) that must be met through system operating revenues and other revenue sources.

The following specific items are included in the City's revenue requirements raised from rates:

Operating Expenses

Operating Transfers

Capital Outlays Funded from Rates

Debt service -- Current

Debt Service -- Forecast

All data used in the development of the revenue requirements was obtained from the financial statements, budgets and other information provided by the City. Detailed calculations are presented in the rate model contained in **Appendix A** of this report. For rate design purposes, revenue requirements are developed separately for the water and wastewater systems.

The assumptions utilized in this forecast will be thoroughly detailed in this section of the report. These assumptions, particularly those associated with the City's capital expenditure budget, are critical to the

development of both the revenue requirement and the ultimate rate recommendations. The project team has discussed these assumptions with City staff and considers all to be consistent with staff recommendations.

As the first step of this section, current and forecast Operating Costs, Capital Outlays and Debt Service will be examined. Non-rate revenues will be subtracted from the total to yield the net revenue requirement.

Budgeted expenditures for the City's water and wastewater operations are reflected in City's Fund 620 - Wastewater (Sewer) Fund Summary and Fund 600 - Water Fund Summary and FY 2026 budget documents.

Operating Expenses and Capital Outlays – Test Year

Table III-1 summarizes the test year FY 2026 operating costs and capital outlays net of transfers and debt service for the City of Goodyear.

TABLE III-1

CITY OF GOODYEAR

RV	Rainbow Valley	393,000
IC	Instruments & Controls	659,000
OD	Other Departments	80,014,740
	SUB-TOTAL	\$ 94,297,340
Total Operating Expenses		\$ 126,478,886
Water Capital Outlays		6,329,900
WW Capital Outlays		7,501,300
Total Operating Expenses and Capital Outlays		\$ 140,310,086

Debt Service payments for principal and interest were subtracted from Operating expenses and will be included separately in the Debt Service Expense section. Minor debt administration expenses were retained in the water and wastewater operating expenses.

The following is notable about the operating expenses shown:

- Operating Expenses capture the primary operating costs associated with the day-to-day management of the water and wastewater utility.
- The City's Water Operating Budget is comprised of 11 functional areas: Administration, Maintenance, Distribution, Production, Water Quality, Water Resources, Instruments & Controls, Groundwater Treatment, Surface Water Treatment, CAP Water, and Other Departments.
- The City's Wastewater Operating Budget is comprised of 10 functional areas: Administration, Maintenance, Collections, Environmental Programs, Reclamation, Corgett, Goodyear, Rainbow Valley, Instruments & Controls, and Other Departments.
- Expenses in each functional area are then separated into six expense categories: Personnel, Contractual Services, Commodities, Capital Outlays, Internal Service Charges, and One Time Supplementals & Reimbursements.
- Personnel Services include salaries, benefits and insurance for the water and wastewater utility staff. Allocations and projected additions of personnel to the functional areas of the utility were made based on input from Utility staff in order to allocate personnel costs.
- Contractual Services expenditures include costs for utilities, maintenance services, professional consulting fees, laboratory fees, City's attorney and other contractual service providers plus charges for dues, memberships, training and special permit fees.
- Commodities expenditures cover those costs as they relate to utility assets including, but not limited to, utilities, automotive costs, general office supplies, computer hardware and software, chemicals, water purchases, generators, meters, and maintenance expenditures for wells, booster pumps and treatment facilities.
- "Transfers Out" to the City's General Fund for general overhead reimbursement for services such as human resources, finance and payroll, etc. are listed separately in both the Water and Wastewater budgets.
- One Time Supplementals & Reimbursements include non-recurring operating expenses and capital expenditures.
- Capital Outlays include additional capital equipment and project expenditures not listed in the Capital Improvement Plan ("CIP").

Operating Expenses and Capital Outlays – Ten Year Forecast

Table III-2 presents the project team's ten-year forecast of the City's operating costs under the proposed long-term rate plan. FY 2026 budgeted expenditures are reflected in the proposed water and wastewater FY 2026 budget. All subsequent years in the forecast period were forecast according to the assumptions noted below. Details behind these calculations can be found in the rate model contained in **Appendix A**. This forecast is based on the following set of assumptions:

- Salaries are forecast to increase at an annual rate of 3.5%-5.0%, reflecting the need to remain competitive in the job market by attracting and retaining qualified talent.
- As the City's infrastructure expands, additions to Water personnel are projected over the forecast period. These additions will be primarily in the areas of Water Treatment and Water Distribution.
- Similarly, additions to Wastewater personnel are projected over the forecast period, primarily in the areas of Wastewater Collection and Wastewater Reclamation.
- Most operating costs are expected to increase at an annual rate of 3.0%, which is approximately equivalent to the rate of inflation.
- Certain expenses are forecast to increase at above-inflation rates, to reflect the rapid rate of increase of these costs. These expenses include workers compensation, Medicare and insurance.
- Certain expenses will increase at higher rates to reflect the forecast growth in accounts and volumes. These expenses include maintenance and system repairs.

Table III-2 reveals that water-related operating expenses, transfers and capital outlays are forecast to increase from the test year total of \$44,741,646 to **\$62,548,404** by FY 2035. This represents an annual average increase of **3.8%**. Similarly, wastewater-related operating costs, transfers and capital outlays are expected to increase to **\$37,475,752** by FY 2035.

Water Resources and Recharge

The City's current water supply is sourced from 12 active groundwater wells. However, Arizona groundwater rules require sustainable pumping and/or groundwater replenishment. This may be accomplished in a number of ways including, but not limited to, the purchase of replenishment water through the Central Arizona Groundwater Replenishment District ("CAGRD"), or annual storage and recovery of Central Arizona Project ("CAP"). The least expensive of these alternatives is the purchase of CAP water for groundwater replenishment. However, the City is not currently able to treat and deliver its CAP water directly, so it must be delivered to CAP owned and operated recharge facilities with 20-year permits. Using their allotment for groundwater recharge, the CAP water is utilized in the City's calculation of long-term storage credits to offset replenishment obligations.

The City's quantity of CAP water taken in recent years to meet recharge requirements has increased to **17,742** acre feet in FY 2026, which when adding water wheeling costs to transport water to the RID groundwater storage facility and to the Surface Water Treatment Plant, has a current cost of approximately **\$7,927,446**. The projected cost for CAP water is forecast to increase to approximately **\$10,395,921** in FY 2035. These totals are displayed on Table III-2.

The City has the opportunity to purchase additional CAP water in excess of their current demand to recharge and bank for long term storage credits for drought protection and emergencies. However, at this time and for purposes of the base scenario, the City has decided to maintain CAP water purchases at the demand level and defer the purchase of "Free Agent" CAP water due to the cost.

Existing Debt Service

As shown in **Table III-3** on the next page, the City currently has eleven outstanding water and wastewater obligations. Three of them are scheduled to retire in the next four to five years.

Capital Improvement Plan

Capital improvements are commonly defined as “expenditures to acquire or improve long-term assets such as land, facilities, equipment or infrastructure.” These expenditures typically are for improvements exceeding \$100,000. Recommendations for the water system included approximately **\$261.5M** in water system improvements over the next ten years, and recommendations for the wastewater system included approximately **\$254.9M** in wastewater system improvements over the next ten years. (These totals did not include expenditures for items such as One-time Supplementals & Reimbursements which are already included in the Operating portion of the rate model and forecast.) The City has multiple funding sources for improvements depending upon the nature of the improvements. Following the principle that “growth pays for growth,” developer contributions and impact fees have historically been used when available to fund infrastructure for new development, and the City expects to continue this practice whenever possible. Additionally, the City plans to use a considerable portion of available Fund Balance in order to minimize the impact of rate adjustments on the ratepayers.

A functional breakdown of the ten-year CIP is presented in **Table III-4**.

TABLE III-4

CITY OF GOODYEAR	
CAPITAL IMPROVEMENT PLAN	
SCENARIO: 2025 10 10 -- Scenario I -- Status Quo	
WATER CIP Projects	
61-23-234 - Site 13 & 23 Chlorination System Upgrades	\$ 500,000

NEW - Well 12 Redrill	2,500,000
61-25-460 Well 11 Redrill	2,500,000
60041 - Water Main Replacement	2,553,000
61-24-357 - Site #11 Booster Station MCC Replacement	3,000,000
PFAS Treatment at Site 18	4,060,000
Purchase extinguishment credits	2,000,000
2030 IWMP Update	500,000
2035 IWMP Update	500,000
Expand SWTF to 16MGD	165,000,000
Total Water Projects	261,545,300
WASTEWATER CIP Projects	
61-23-223 - Rainbow Valley Lift Station Force Main	\$ 2,395,900
60077 - Rainbow Valley WRF Expansion - Growth Portion	34,663,540
61-23-245 - Lum Lift Station Force Main	5,544,200
60103 - Corgett WRF Clarifier Rehabilitation and New Clarifier	3,031,800
60062 - Goodyear Motel-Country Aire Apartments Sewer Piping	1,062,000
60093 GWRF Blower Replacement	589,400
61006 GWRF Blower Replacement	611,000
61014 - Goodyear Water Reclamation Facility Expansion	140,481,100
61013- Perryville Grinder Project	2,480,700
61-26-480 Historic Goodyear Sewer Replacements	6,643,000
Perryville Grinder/Auger #1 Replacement	2,547,000
61-24-352 Del Camino Lift Station Generator Replacement	650,000
61016 Wells Fargo Lift Station and Force Main	6,143,500
Fix Bottleneck in Reclaimed Pipe and Improve Aesthetics of SAT Site	3,000,000
Recharge Well 1	10,000,000
Recharge Well 2	10,000,000
SAT Site in WPA 4	18,050,000
2030 IWMP Update	500,000
2035 IWMP Update	500,000
Force main assessments (installing access points, cleaning, televising for pipe condition)	2,500,000
CIPP both main lines from Elwood Rd. into the GYWRF plant due to multiple defects. (\$1M)	2,500,000
Golf LS Demo (including the lift station due to safety hazard with wells) and Cotton force main removal.	1,000,000
Total Wastewater Projects	254,893,140
Total CIP 2026 -- 2035	516,438,440

Forecast Debt Service

A key factor in the development of the City's long-term water and wastewater rate plan is the amount of additional debt forecast to be issued by the City to fund capital projects not funded through development fees or other sources such as private sector development agreement financing or grants.

Forecast debt to be issued is presented in **Table III-5**. **Table III-6** presents the City's total debt service payments over the next decade and is based on the preliminary amortization schedules received from City staff.

Changes in any of these assumptions may require significant changes to the funding assumptions for the CIP and to the rate plan.

TABLE III-5

CITY OF GOODYEAR FORECAST LONG-TERM DEBT REQUIRED TO FUND CIP			
	Water	Wastewater	Total
2026	\$ -	\$ -	\$ -

Non-Rate Revenues

Although rate revenues constitute the majority of the revenue received by the City for water and wastewater service, a certain amount of revenue is accrued from non-rate sources. These revenues include other general fees, surcharges, development charge, and service revenues. For the City of Goodyear, Non-Rate Revenues also include DIF transfers and on-time developers' contributions. These non-rate revenues are subtracted from the overall budget to determine the revenue requirement to be raised from rates.

Most non-rate revenues are conservatively forecast to remain stable during the next ten years. **Table III-7** presents forecast non-rate revenues by year over the next decade under the proposed rate plan.

TABLE III-7

CITY OF GOODYEAR				
FORECAST NON-RATE REVENUES				
SCENARIO:				
2025 10 10 -- Scenario I -- Status Quo				
	Water		Wastewater	Total Water & WW

2035		6,127,713	2,300,839	8,428,552

Net Revenue Requirement

Table III-8 on the next page presents the City's net revenue requirement to be raised from rates in the test year FY 2026 and the forecast period. As the table reveals, the net revenue requirement to be raised from rates in the test year FY 2026 for water service is \$45,601,689, and for wastewater service is \$40,241,428.

The combined water and wastewater net revenue requirement for the next decade is forecast to increase from \$85,843,117 in FY 2026 to \$138,127,931 in FY 2035. This represents an annual rate of growth of **5.4%**.

Detailed calculations are presented in the rate model contained in **Appendix A** of this report.

TABLE III-8

Water Utility Cost Functionalization, Classification and Allocation

Once the total water and wastewater system costs have been identified, the next step in the rate development process is to isolate the costs associated with each system function. Some of these expenditures are a function of base water demand; others are based on the peak demands placed on the system. Certain costs are associated with serving customers regardless of the volume of water use or wastewater discharge. The basic steps used to allocate the City's water revenue requirements include the following:

1. Each system's costs (revenue requirements) are categorized by utility function (i.e. treatment, distribution, administrative, customer). This process is known as *functionalization*.
2. Functionalized costs are classified based on the service characteristics or the types of demand served by the utility (base and maximum day). This process is known as *classification*.
3. Costs by service characteristic are allocated to customer classes in proportion to the service demands demonstrated by each class.

This three-step process allows for the allocation of system costs in the same terms as customer classes. The approaches described in this section follow standard industry practices. Water system costs are allocated to the following functions:

Supply/Treatment – the process by which raw water is obtained and converted to potable water

Distribution – the lines that carry water to individual customers' properties

Administration – miscellaneous overhead and other non-operating costs

Customer Billing – the processes involved in billing and providing other services to customers

The project team allocated operating budget line-item expenses individually to system functions based on general guidelines, specific research and input from City staff. The results of the allocation process for the test year are presented in **Table III-9**. The rate model presented in **Appendix A** includes a detailed listing of the allocations by line item.

TABLE III-9

CITY OF GOODYEAR			
TEST YEAR WATER COST FUNCTIONALIZATION			
SCENARIO: 2025 10 10 -- Scenario I -- Status Quo			
TY 2026			
Function	Revenue Requirement	Percent	
CAP Water	\$ 5,137,080	11.3%	
Treatment	17,696,583	38.8%	
Distribution	17,136,191	37.6%	
Administration	4,990,822	10.9%	
Customer	641,012	1.4%	
Total	45,601,689	100.0%	

Water Utility Cost Classification

The allocation of functionalized water system costs to service characteristics follows the base-extra capacity cost allocation method recommended by AWWA. Using this method, costs are segregated into the following categories:

Base costs – capital costs and O&M expenses associated with service to customers under average demand conditions. This category does not include any costs attributable to variations in water use resulting from peaks in demand. Base costs tend to vary directly with the total quantity of water used.

Maximum Day/Extra Capacity costs – costs attributable to facilities that are designed to meet peaking requirements. These costs include capital and operating charges for additional plant and system capacity beyond that required for average usage.

Customer Billing costs – costs associated with any aspect of customer service, including billing, accounting, and meter services. These costs are independent of the amount of water used and the size of the customer's meter, and are not subject to peaking factors.

According to AWWA Manual M-1, in the base-extra capacity method, care must be taken in separating costs between those devoted to base capacity and those devoted to extra capacity. The peak to average factor is calculated by dividing the volume on the peak day of the year by the average daily volume. Facilities designed to meet maximum-day requirements, such as the treatment and distribution functions, are allocated 63.7% (1/1.57) to base, and 36.3% to extra capacity (Max Day). This means that facilities designed to meet maximum-day requirements, such as the treatment and distribution functions, are allocated 63.7% to base, and 36.3% to extra capacity.

All customer service-related costs are allocated 100% to customer billing. Administration costs are generally not directly assignable to individual classifications. Therefore, it is standard ratemaking practice to allocate these costs on an indirect basis to service characteristics. The rate model in Appendix A provides detailed allocations of costs to service characteristics. The system-wide costs by service characteristic are shown in **Table III-10**. As with cost functionalization, these percentages are not expected to change significantly in the forecast period.

TABLE III-10

CITY OF GOODYEAR			
TEST YEAR WATER COST CLASSIFICATION			
SCENARIO: 2025 10 10 -- Scenario I -- Status Quo			
Function	TY 2026 Revenue Requirement	Percent	
Base	\$ 28,626,897	62.78%	
Maximum Day	16,317,332	35.78%	
Customer	657,460	1.44%	
Total	45,601,689	100.0%	

Water Utility Cost Allocation

Allocation of costs by service characteristic to customer classes is based on the proportionate use levels of each characteristic by each class. The water utility costs for test year 2026 by customer classes are presented in **Table III-11**. The water utility costs by customer class for the entire forecast period under the proposed rate plan are summarized in **Table III-12**. Overall cost calculations are presented in detail in the rate model contained in **Appendix A**.

Wastewater Utility Cost Functionalization and Allocation

Wastewater system costs are allocated to the following functions:

Treatment -- Volume – the costs associated with treating wastewater volume discharges

Collection – the lines that transport wastewater from customers' properties to the wastewater treatment plant

Administration – miscellaneous overhead and other non-operating costs

Customer Billing – the processes involved in billing and other services to customers

As was the case for the water system, wastewater utility operating budget line-item expenses are allocated individually to functions. The results of the allocation process are presented in **Table III-13**. The rate model in Appendix A presents a detailed listing of the cost allocations by line item. As with the water utility, these percentages are not forecast to change significantly during the next ten years.

TABLE III-13

Reclaimed Water Rate

Reclaimed water refers to the use of treated effluent, and recharge refers to the practice of storing renewable surface water (underground) for recovery later during periods of reduced water supply. As a member of the Central Arizona Groundwater Replenishment District ("CAGRD"), the City's Water Resource Plan includes the development and operation of multiple Water Reclamation Facilities ("WRF") for effluent reuse and recharge. City's recharge program is subject to numerous requirements and guidelines put forth in Arizona's Assured Water ("AWS") Rules and the Groundwater Replenishment District Act, including the ongoing process of obtaining and maintaining many permits. The direct cost of these permits as well as the indirect costs of the man-hours required to complete the applications and related documentation are significant factors in calculating the annual cost of these programs.

The City is required to replenish the aquifer for excess groundwater used through the utilization of reusable water supplies. Through these actions, the City acquires recharge credits. While the City reduces its reliance on groundwater through the use of treated effluent, it must still meet the remainder of its replenishment obligation through other means or pay CAGRD per acre-foot for the unmet portion of its replenishment obligation. Among the options available to the City are the following:

- Use of reclaimed water for recharge in areas of groundwater pumping
- Use of reclaimed water to reduce groundwater pumping through the use of treated effluent for construction water, turf and landscape irrigation and industrial purposes
- Use of the City's allocation of CAP water for long term storage credits

While the golf courses, parks and other areas irrigated with reclaimed water are directly served by the utility, in practice, the full cost of these functions is not typically passed through to the users. As noted in the AWWA Water Reuse Rates and Charges 2000 and 2007 Survey Results, published by the AWWA Water Reuse Committee:

"Reclaimed water has become a key resource to provide sustainable water supplies to meet...future planning requirements. However, the pricing and recovery of costs associated with reclaimed water has been an obstacle for many utilities. Generally speaking, if reclaimed water rates were set at the cost of service, they would be higher than potable water rates due to the increased treatment required as well as the cost of a secondary distribution system. Obviously, this would not encourage the use of reclaimed water by a utility's customers. Rates are generally set at a much lower rate than the full cost of service; therefore, costs will usually not be recovered through reclaimed water rates."

Customers receiving reclaimed water do not receive a greater benefit from reclaimed water than they would by receiving potable water unless the non-implementation of reclaimed water use will result in potable water restrictions through regulation, conservation, drought, etc. However, reclaimed water benefits a utility's existing water customers by deferring, reducing or eliminating the need to develop new sources of supply in the future. Additionally, a utility's existing wastewater customers benefit if no or fewer upgrades are needed for the system to meet regulatory requirements because of reuse standards. This can defer, reduce or eliminate the need to develop additional treatment capacity."

Market research indicates **the maximum rate at which to set reclaimed water, should be set at the utility's current potable water rate.**

Section IV

SECTION IV

Water and Wastewater Rate Design

Rate design involves determining charges for each class of customers that will generate a desired level of revenue in accordance with AWWA and other industry cost of service rate-making principles. The water and wastewater rates developed in this section are designed to recover the test year and forecast revenue requirements while providing funding for the identified capital improvements. The most significant impact on rates will be the amount of debt that will be required to fund the capital improvement plan.

The water and wastewater rate plan recommended to the City was also developed in accordance with the City's input, financial policies and goals. Among these financial policies and goals were the following:

"Enterprise Funds should be self-sufficient. They should include a sufficient un-appropriated fund balance to absorb fluctuations in annual revenue. Wherever possible, enterprise funds should be charged directly for "overhead" services, rather than using an indirect service transfer. Provision should also be made for interdepartmental charges for services such as solid waste disposal (landfill) and vehicle repair, when this is practical. Operational revenue should be great enough to cover capital costs and replacement."

During the course of this engagement, the project team met with City staff to discuss numerous alternative rate scenarios and rate plans. As a result of these discussions, staff and the project team settled on the rate design scenario contained in this section. As noted in the previous section, these revenue requirements include all direct and indirect expenditures for operations and maintenance, capital requirements for expansion, repair and replacement, debt service and required reserves. The proposed rate plan is designed to capture sufficient revenues for these purposes as well as coverage of the basic cost of service.

In accordance with City policies, it is recommended that rate changes continue to be implemented in January of each year.

Proposed Rate Plan

Under the proposed rate plan, the City implements a series of annual water and wastewater rate adjustments over the period FY 2026 - FY 2029 to achieve cost of service rates for water and wastewater operations. The projected rate revenues collected are forecast to be sufficient to fund all operating expenses and capital

obligations in each of the forecast years. Additionally, to minimize the impact of rate adjustments on the ratepayers, the City will rely on annual Fund Balance drawdowns.

This plan assumes the following:

- Maintains the current rate design structure for both water and wastewater customer classes
- Rate adjustments are uniformly applied to both base and volume charges
- Water rate adjustments are uniformly applied to all water rate classifications
- Wastewater rate adjustments are uniformly applied to all wastewater rate classifications

Table IV-1 presents a summary of the water rate plan proposed for the City under this plan for the next four years and **Table IV-2** presents a summary of the wastewater rate plan. **Table IV-3** presents examples of the impact on typical monthly bills. The recommended rate plan continues the City's policy of implementing water and wastewater rate changes in January of each year.

Appendix A presents pages from the rate model that summarize both the rate recommendations and forecast net revenues under this alternative by year over the forecast period.

While this study presents a forecast of rates over the next four years, it is recommended that the City monitor actual growth in accounts and consumption, and update its forecasts annually due to the dynamic nature of growth in the City, and the rapid rate of change within the Utility and the City. Periodic reviews will enable the City to assess the need for re-adjustments to the long-term rate plan.

SECTION V

Solid Waste Cost of Service and Rate Design

This section of the Rate Study and Long-Term Financial Forecast focuses on the City's solid waste and recycling services which are managed and funded through the Solid Waste Operating Fund. Using current and projected costs and accounts as a base, the cost of service and revenues by customer class are developed for the forecast period FY 2026 through FY 2035. The forecast includes recommendations for rate adjustments designed to enable the utility to recover sufficient revenues to fund projected operating and capital expenses.

As with the water and wastewater utility, these recommended rates are designed to only recover the cost of service, and are based on national ratemaking standards.

The City's solid waste operations consist primarily of Residential collection of refuse and recycling.

The majority of these services and revenues are based on set monthly fees, but approximately 1.9% of revenues in the Solid Waste Operating Fund are derived from special service fees including those from additional containers, customer service administrative fees, other miscellaneous fees, and investment income.

Table V-1 presents the City's current rate schedule for solid waste services. Residential customers have their refuse collected once a week and are assessed a flat fee of **\$22.80** per month for weekly collection and disposal of one 95 or 65 gallon trash container and one 95 or 65 gallon recycling container. The flat Residential rate includes the cost of recycling and collection of bulk trash (once per month) in addition to regular trash collection.

TABLE V-1

CITY OF GOODYEAR		
CURRENT SOLID WASTE RATES		
*Rates do not include sales tax		
<u>Residential Monthly Fees</u>		
Residential Service	\$	22.80
Additional Trash Container	\$	8.43
Includes:		
a) one time weekly trash pick-up		
b) one time weekly recycling pick-up		
c) one time monthly bulk pick-up		

Chart V-2 compares the City's current monthly Residential charge for Residential collection and disposal to those of neighboring municipalities. The table reveals that the City's rates are comparable to, or lower than, most other cities in the region.

The rate data is based on published rates and ordinances posted by each municipality in their rate ordinance. These rates do not include sales tax, activation or other charges.

CHART V-2

*Solid Waste rates as of May 2025

Solid Waste Current and Forecast Accounts

Table V-3 presents the total residential customers and additional containers in the test year FY 2026. There are 37,355 residential customers in the City. The Table reveals that around 3.8% of residential customers (or 1,459) requested an additional container.

TABLE V-3

CITY OF GOODYEAR		
CURRENT SOLID WASTE CUSTOMERS		
Container Size	Customers	Percent
Residential 95/65 Gallon Container	37,355	96.2%
Residential -- Additional Container	1,459	3.8%
Grand Total	38,814	100.0%

Chart V-4 represents the ten-year growth forecast for solid waste accounts and additional containers. The average growth rate of **3.0%** closely follows the expected growth in water and wastewater customers. This is to be expected, as both water/wastewater and solid waste services are primarily household-based.

CHART V-4

Current and Forecast Revenue Requirement

The City contracts with a private company (Waste Connections of Arizona) for once per week curbside collection of refuse and recycling to residential customers. The contract has provisions for several annual adjustments,

such as Consumer Price Index increases and fuel adjustments. These annual adjustments cannot exceed 4.0% in any single year.

Other contracted services include waste disposal at the City of Glendale landfill and hazardous waste handling and disposal provided by Advanced Chemical Transport Inc.

Table V-5 presents the City's FY 2026 Solid Waste budget summary:

TABLE V-5

CITY OF GOODYEAR	
BUDGET OPERATING EXPENSES SOLID WASTE BUDGET SUMMARY	
	2026
<u>Personnel/Operating</u>	
Contracted Services	\$ 6,113,791
ADMINISTRATION -- 60640002	1,150,300
CONTAINED TRASH -- 60640003	901,300
UNCONTAINED TRASH -- 60640006	846,800
Total Operating Expense	9,012,191
Capital Outlays	1,165,900
Transfers	988,600
Debt Service	-
Total Cost of Service	11,166,691
Non-Rate Revenue	(70,600)
Revenue Requirement	11,096,091

The largest cost elements of the Solid Waste Fund are the contracted services. Contracted services carry a cost of \$6,113,791 in the test year TY2026 and represent approximately 54.8% of the total cost of service. The Solid Waste Fund has other expenses which are largely for administration and container maintenance.

Additionally, Solid Waste Utility FY 2026 budget reflects a General Fund transfer of \$988,600 and Capital Outlays expense of \$1,165,900.

The forecast assumes that most expenses increase by an inflation rate of 3-4% and assumes that Contracted services will increase by the associated growth of volumes or accounts plus inflation. A greater inflation factor was applied for insurance costs.

The Solid Waste Utility does not maintain any outstanding debt at present; however, the City plans to issue new debt of appx. **\$39.8M** in FY2027 to fund Solid Waste Utility related capital projects. **Table V-7** on the next page presents forecast debt issues. The debt is assumed to be for a 20-year term at an interest rate of 5.0%.

Chart V-6 below presents the solid waste fund's functionalized cost of service for the test year FY 2026.

CHART V-6

TABLE V-7

CITY OF GOODYEAR FORECAST LONG-TERM DEBT TO FUND CIP				
Scenario: 2025 09 03 - Scenario II - \$39M Debt				
	Solid Waste		Total

Proposed Rate Plan

Table V-9 presents the recommended solid waste rate implementation schedule. Table V-10 on the following page presents a ten-year forecast of solid waste revenues and expenses. The following should be noted about this recommendation:

- The rate design continues the City's policy of charging a monthly charge for sanitation service.
- The increases are proposed to become effective on January 1 of each fiscal year of the rate plan period.
- Assumes a new bond issuance of \$39,794,000 to fund Solid Waste related capital projects

Notes on Rate Recommendations

The forecast and recommendations presented in this study represent a combination of the best information available from the City and the project team's expertise. However, this forecast relies in part on assumptions about future events and events beyond the control of the project team (such as account growth rates within the City). The forecast and recommendations contained in this study may be subject to revision if any of the following events occur:

- Actual growth in accounts and consumed volumes is less than (or significantly greater than) forecast
- Capital improvement plan funding costs increase significantly due to the rising cost of materials or other factors
- An unforeseen event impacts the City, such as an extended recession, natural catastrophe or terrorist attack
- Increases or decreases in interest rates, coverage requirements or reserve requirements for municipal long-term debt.
- City budget levels or priorities change significantly from those forecasted in this study

It should be noted that none of these events are foreseen by the project team or by the City at this time.

If any of these events occur the City may be compelled to consider further adjustments to its water, wastewater, and solid waste rates.
