

Check for Leaks

Use your home's water meter to check for hidden leaks!

Small leaks can account for up to 15% of household water use.

1

Locate your meter box.
Usually located near the street with a brown metal lid. Watch for critters.

2

Read the number.
The number in the white boxes minus the number on your latest bill equals your most recent use in thousand gallons.
E.g. 406 - 401 = 5,000 gallons

3

Is the dial moving?
With everything off, the dial should be still. If you have a pool, you may need to temporarily turn off your auto-fill valve to check this.

4

Measure the amount. If you see unscheduled movement, measure how long it takes for a gallon to pass through.

5

Isolate the leak. Start turning off valves or fixtures outdoors first, then indoors, until the meter stops. This will help isolate the issue.

Visit
GoodyearAZ.gov/highwaterbill
for more information on common leaks.

6

Schedule your next check. Set a reminder to check for leaks this way every 2-4 weeks. This will help catch large and small hidden leaks early.
